

6 REASONS YOU'LL LOVE

1. NO MORE HEAVY LIFTING or BOTTLE STORAGE

A full 5 gallon bottle weighs about 42 pounds and is very difficult to handle.

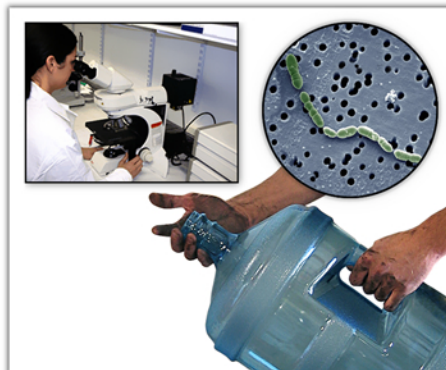

Costly injuries associated with bottled water can result in lost or restricted workdays.

2. NO CONTAMINANTS

A bottled water cooler is an ideal breeding ground for harmful bacteria and viruses. Many hands have come into contact with your water bottle before you receive it. Therefore, any germs on the bottle are then directly deposited into a reservoir of nonchlorinated drinking water for your use.

Aqua Chill's sealed reservoir protects your drinking water from these dangerous elements.

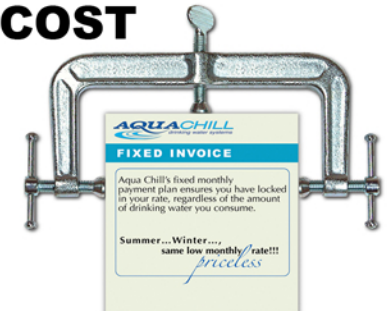

3. SECURITY

The Aqua Chill drinking water system completely eliminates strangers from coming in and out of your premises at all hours. Your Aqua Chill cooler delivers purified water on demand 24/7, via reverse osmosis.

4. FIXED MONTHLY COST

Aqua Chill's fixed monthly payment plan ensures you have locked in your rate, regardless of the amount of drinking water you consume. Summer... Winter..., same low monthly rate!!!

5. COST SAVINGS

You'll save up to 30 to 50% off the cost of bottled water with your new Aqua Chill system. If you're using bottled water now, about half the cost of each bottle delivered is attributed to the cost of fuel and delivery.

6. ENVIRONMENTALLY SAFE A Green Product

- Say **NO** to the use of millions of barrels of oil wasted in the manufacture of plastic bottles.
- Say **NO** to greenhouse gases released into our atmosphere by exhaust emissions caused by bottled water deliveries.
- Say **NO** to non-biodegradable plastic bottles contributing to our landfills.

Say yes to Aqua Chill... Save your environment !
